CARDIACPRO

CARDIAC HEALTH
PROFILE

WHY TO
WORRY ABOUT
CARDIOVASCULAR
DISEASE (CVD)?

Primary cause of death globally is CVD.

422.7 million cases of CVD exist around the world as of 2015.

Out of the 17 million premature deaths (< 70 yrs) due to noncommunicable diseases in 2019, 38% were caused by CVDs.

Around 47% of sudden cardiac deaths occur outside a hospital, suggesting that many people with heart disease don't act on early warning signs.

CARDIAC PRO consists of a group of advanced tests that provide immediate, actionable clinical information for the risk stratification and aid in predicting future cardiac events.

CARDIAC
RISK MARKERS

hs Troponin I

Highly sensitive and preferred cardiac marker to rule out any cardiac event and to access the risk of future CVD.

hs CRP

Highly sensitive marker of inflammation. An increased level may indicate a higher risk of CVD.

hs Troponin T

Latest generation independent prognostic marker that aids in diagnosis of MI in an acute setting and also supports to identify relative risk of CVD.

Homocysteine

Prognostic marker for CVD events.

ProBNP

This test is used to diagnose and & rule out congestive heart failure.

Lp-PLA₂ (PLAC)

(Lipoprotein-associated Phospholipase A2) is a special enzyme linked to inflammation in blood vessels and detects risk of plaque building up in the arteries (atherosclerosis), which can lead to heart attacks or strokes.

Basic Cardiac Risk Profile

INR 3,500/-

- . High-Sensitivity C-Reactive Protein (hs CRP)
- . Homocysteine
- . High-Sensitivity Cardiac Troponin I test (hs Troponin I)

Basic Cardiac Risk Profile with Lipid Profile*

INR 4,100/-

- . Lipid Profile*

Comprehensive Cardiac Risk Profile*

INR 13,900/-

- . High-Sensitivity C-Reactive Protein (hs CRP)
- . High-Sensitivity Cardiac Troponin I test (hs Troponin I)
- . High-Sensitivity Cardiac Troponin T test (hs Troponin T)
- . Pro-B-type Natriuretic Peptide (Pro BNP)

- . Leptin
- . Extended Lipid Profile*

(Lipid profile with Lipoprotein (a), Apolipoprotein A & B, Homocysteine)

Comprehensive Cardiac Risk Profile with Lp-PLA₂* INR 17,500/-

- . Lp-PLA₂ (PLAC)

Risk Factors For Cardiovascular & Heart Disease

- . Age (>65 years)
- . Family history
- . Diabetes mellitus
- . Smoking/Alcohol
- . Diet
- . Hyperlipidemia
- . Hypertension
- . Obesity
- . Physical inactivity

Note- Tests marked with (*) require minimum 10-12 hours fasting
